Instructions to Authors

Scope of Submitted Manuscripts
Papers published in Molecular Interventions are generally invited by the Editor after consideration of recommendations from the Editorial Advisory Board. Others have an interest in writing for consideration of recommendations from the Editorial Advisory Board. Authors are asked to be critical of methods, results and to challenge accepted concepts when warranted. Conflicting points of view are to be presented objectively in good perspective. Deficiencies in the field may be pointed out and avenues for further work may be indicated. The usual length ranges between 6 and 24 pages, corresponding to about 25 to 35 manuscript pages. Diagoras, tables, and illustrations should be included to bring out new concepts and important relationships. The Editor will work with the author to further develop the graphs for the article. All review article manuscripts will be peer-reviewed and edited prior to publication.

Submission of Manuscripts
Submit three (3) hardbound copies of each manuscript (including illustrations) as well as an electronic version to:

Dr. Harry R. Smith, Editor
Molecular Interventions
AIPET
9501 Rockville Pike
Bethesda, MD 20814-3995

(301) 948-7760
fax: (301) 948-7045
e-mail: hsmith@aipet.org

Full responsibility for all PC or Mac platforms acceptable. Microsoft Word preferred. Authors preparing distance learning can be accepted. If the manuscript contains any illustrations, where appropriate captions should be included, if not acceptable. Authors are encouraged to supply a digital copy of their illustration. Image files should be submitted as TIFF, or EPS formats are strongly preferred. Illustrations created in Adobe Illustrator, Photoshop, or Corel Draw should be saved in EPS format.

A completed copy of the Molecular Interventions Copyright Transfer Form signed by the corresponding author should be included with the manuscript as the time of submission (a copy of the form is available online at www.molecularinterventions.com). Submission of a manuscript amounts to assurance that the work has received proper clearance from the author’s company or institution, that it has not been copyrighted, published, or accepted for publication elsewhere, that it is not currently being considered for publication elsewhere by the corresponding author; that all figures, tables, and other materials included for publication do not infringe on the rights of others. Manuscripts should be typewritten and double-spaced throughout the entire document, including the figures and tables.

1. Title Page. The title page should contain the complete title of the article, the names of all authors, and full contact information for the corresponding author (address, phone, fax, e-mail). A running title and at least five keywords should also be given.

2. Abstract. The abstract should be approximately 50 words, and should provide the context in which the topics of the article should be understood. It should be intelligible to the general reader without reference to the text. Reference statements are not permitted in abstracts, and nonstandard abbreviations should not be included.

3. Body of Manuscript. It is highly recommended that the body be divided into conceptual sections, the list of which should be labeled INTRODUCTION, METHODS, RESULTS, DISCUSSION, and the list of which should be labeled CONCLUSIONS. Section headings should be given all capital letters, subsection headings in standard lowercase, and subsubsection headings in italics.

4. Acknowledgements. The Acknowledgements section is placed at the end of the text.

5. References. References cited in the text by number. In the reference list, the reference should be added in the order in which they are first cited in the text. The names of all authors should be given in the reference list. Abbreviations for journals should be consistent with the BMJ list of so-called (Bibliographic Information Services for Biological Abstracts, Philadelphia, PA 19103). References to personal communications, unpub-

lished observations, and papers submitted for publication are given in parentheses at the appropriate location in the text, text to text in the references. Only papers that have been officially accepted for publication may be cited as “in press” in the reference list. The authors are responsible for the accuracy of the reference. The format for journal articles, chapbook, and book references is as follows:

- Dromgoole, B. and Broman, J. Overview of catecholamines in selected endocrine sys-

tems. in Neurotransmitters (Ziegler, M.G. and Lake, C.R. eds) pp 439–449, Williams &

- Takeda, K. and Mavros, R.A. Manual of Pharmacologic Calculations with Computer

- Table. Each table must be on a separate page. The titles are numbered consecutively

with Arabic numerals, and labeled to fit the column or page size of the journal. A

detailed description is provided at the top of each table. General statements about the

table follow the title (e.g., paragraph form). For numeric values, decimals are indicated by a

comma; superscript letters (a, b, c) (e) defined beneath the table.

- Figures. Each figure must be on a separate page. The figure must be numbered consecutively

with Arabic numerals, and labeled to fit the column or page size of the journal. A

detailed description is provided at the top of each figure. General statements about the

figure follow the title (e.g., paragraph form). For numeric values, decimals are indicated by a

comma; superscript letters (a, b, c) (e) defined beneath the figure.

- Author Photographs. Photographs and illustrations must be labeled with a magnification calibration in micrometers or angstroms next. A statement concerning the image must appear in the figure legend.

- Author Photographs. Supply a color glossy photograph of each author: Head-size (top of head to bottom of ears) should be no smaller than 1.5 inches, or, allow generation of institutional icons. Icon sizes on all sides for cropping. Write full name on back of photo; identify multiple authors as necessary. Digital images of approximately 4MB are accepted.

- Author Photographs. Supply a color glossy photograph of each author: Head-size (top of head to bottom of ears) should be no smaller than 1.5 inches, or, allow generation of institutional icons. Icon sizes on all sides for cropping. Write full name on back of photo; identify multiple authors as necessary. Digital images of approximately 4MB are accepted.
